

Let It Snow

Sensory Bottle

You will need:

Large plastic water bottle (empty and clean)

1 bottle of clear glue

White glitter

Assorted snowflake buttons/beads

Lukewarm water

Strong glue

Method

1. Empty the whole bottle of clear glue into the empty water bottle. The glue makes the water thicker so the glitter and snowflakes are suspended for longer.
2. Fill the rest of the bottle with lukewarm water.
3. The water may look lumpy for the first few hours but it will settle eventually.
4. Pour 1 teaspoon of glitter into the bottle.
5. Add in the snowflake buttons/beads.
6. Once you are happy you have added enough glitter and snowflakes, glue the lid onto the bottle with strong glue.
7. Let it snow! Shake the bottle and watch as the snowflakes fall.
